- Your screen now looks like this after you enter all the IP s and clicked ok
- make **sure** TCP/IP is showing
- if it is **not** showing you will not connect
- If you have not connected, repeat the process.

If that doesn't work contact IM and have them check for local firewall issues

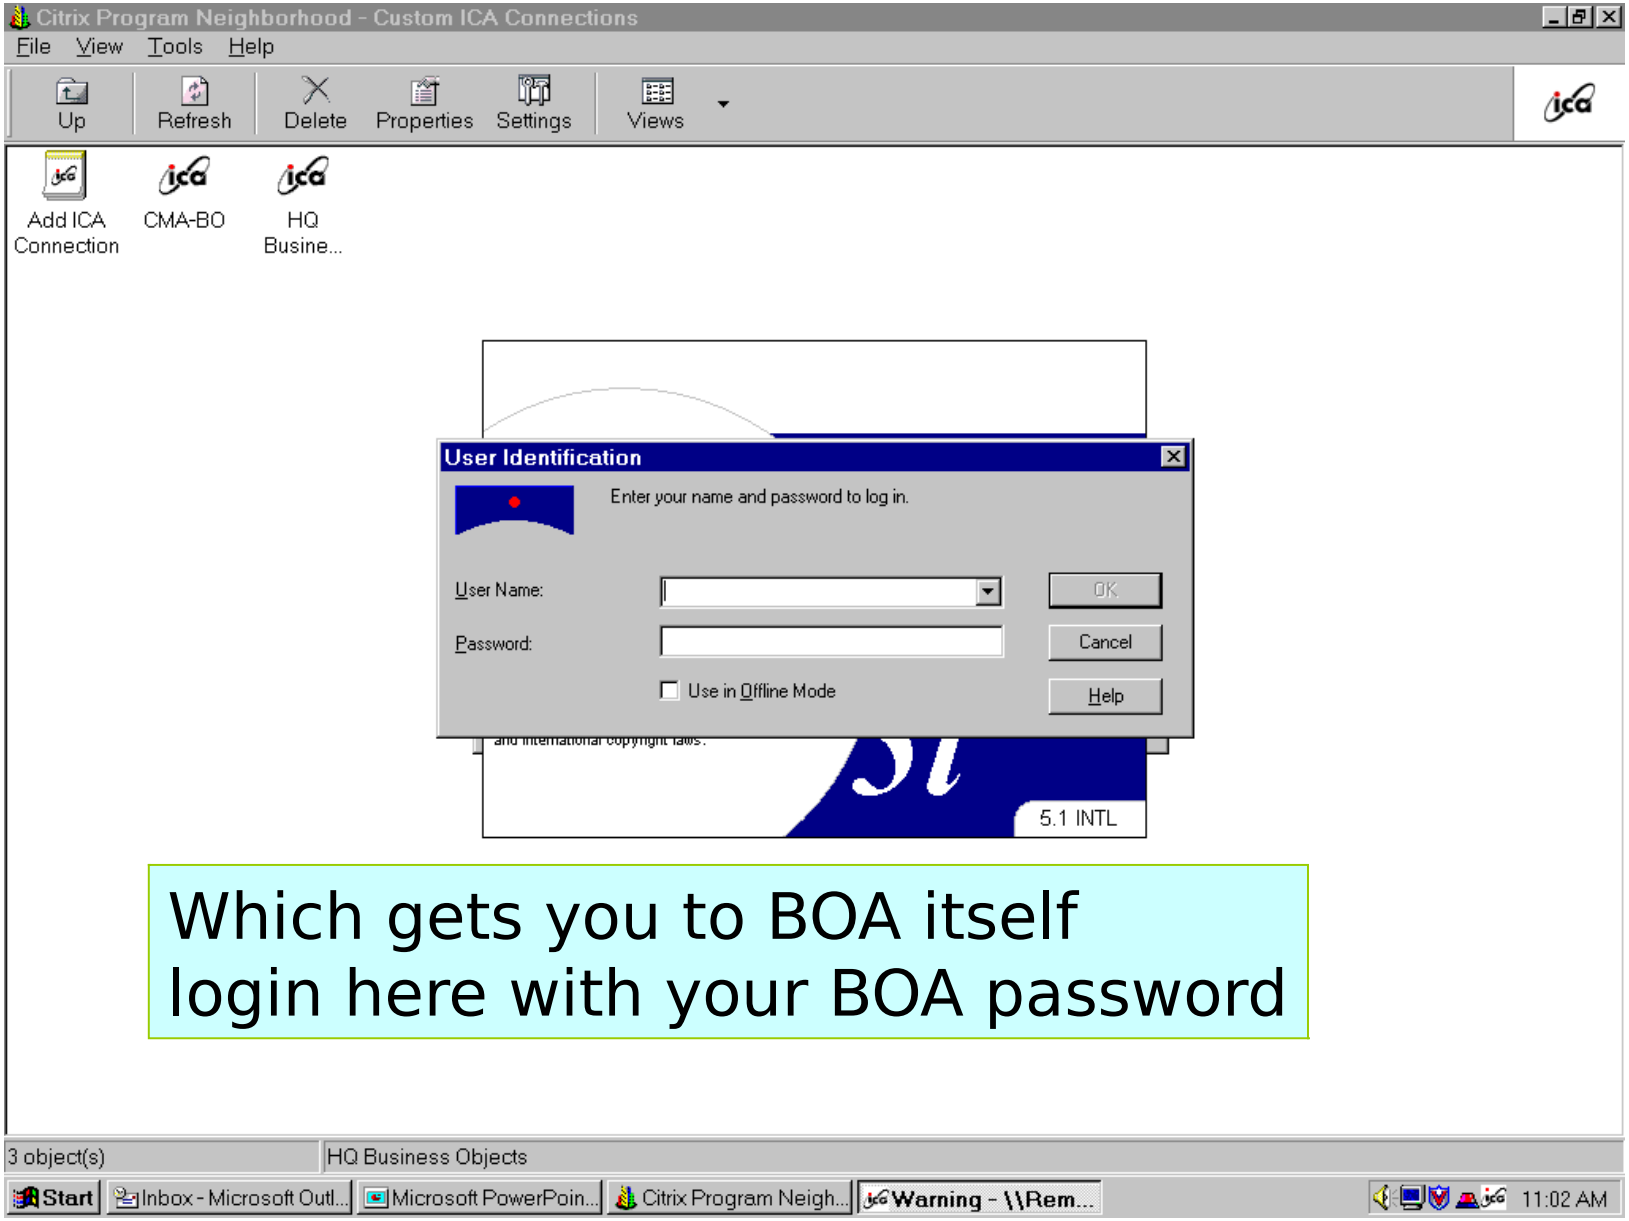
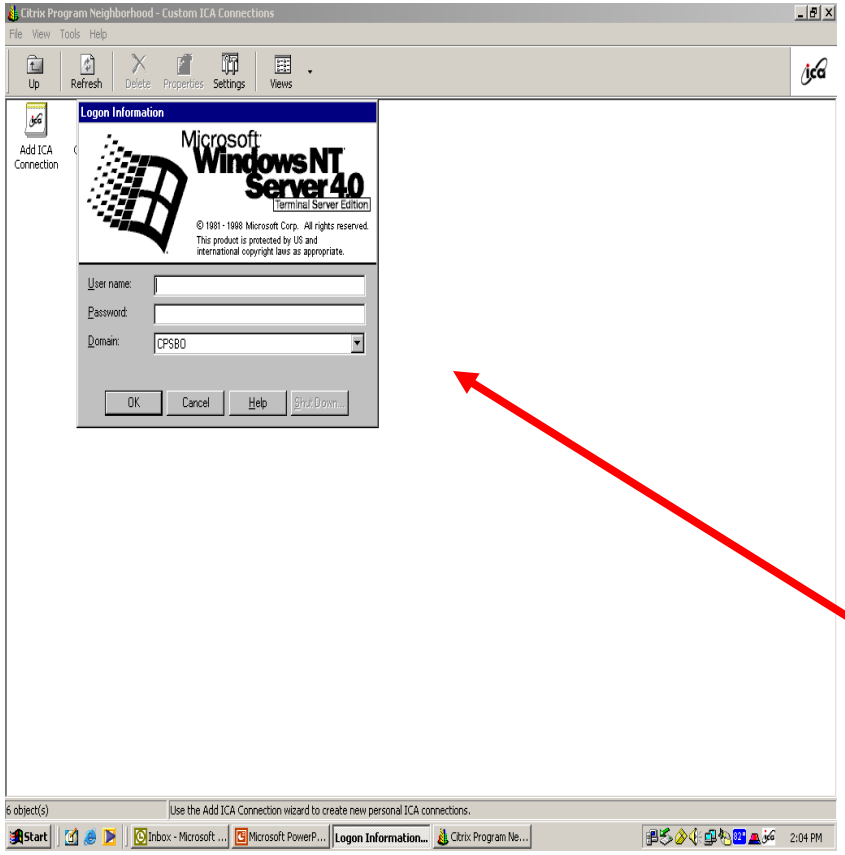
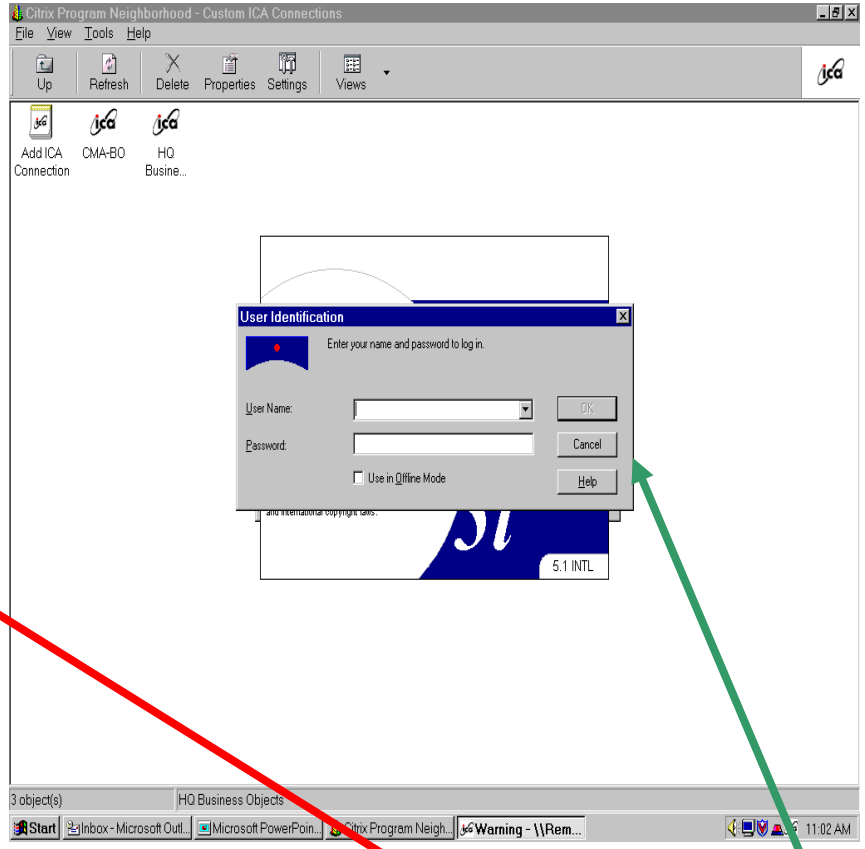
After you get your passwords enter the first set here

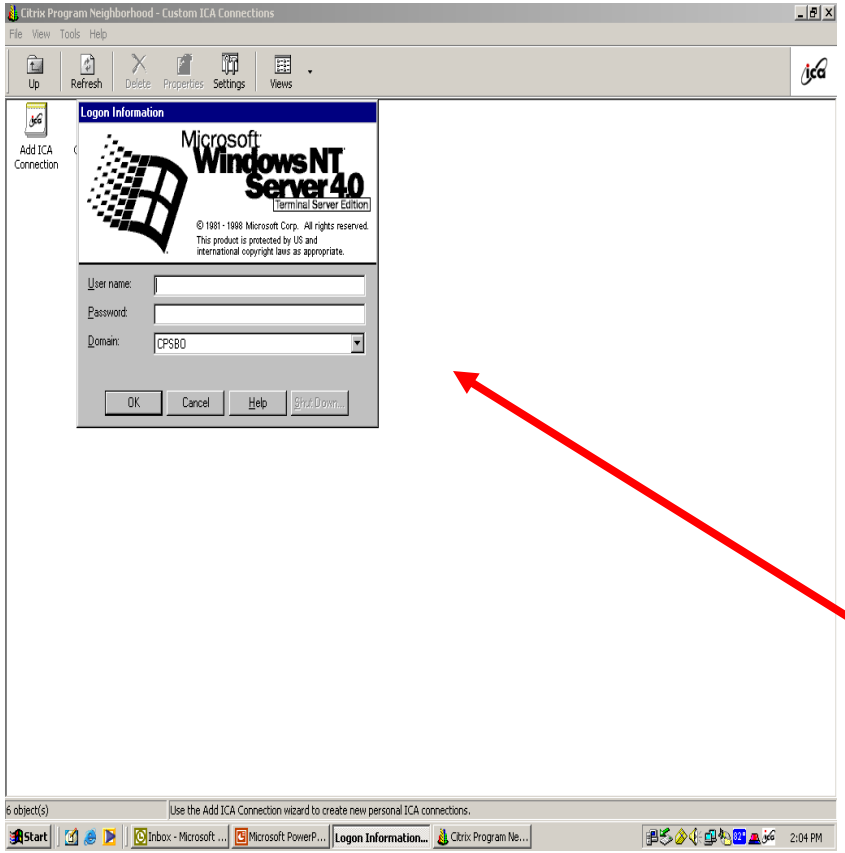


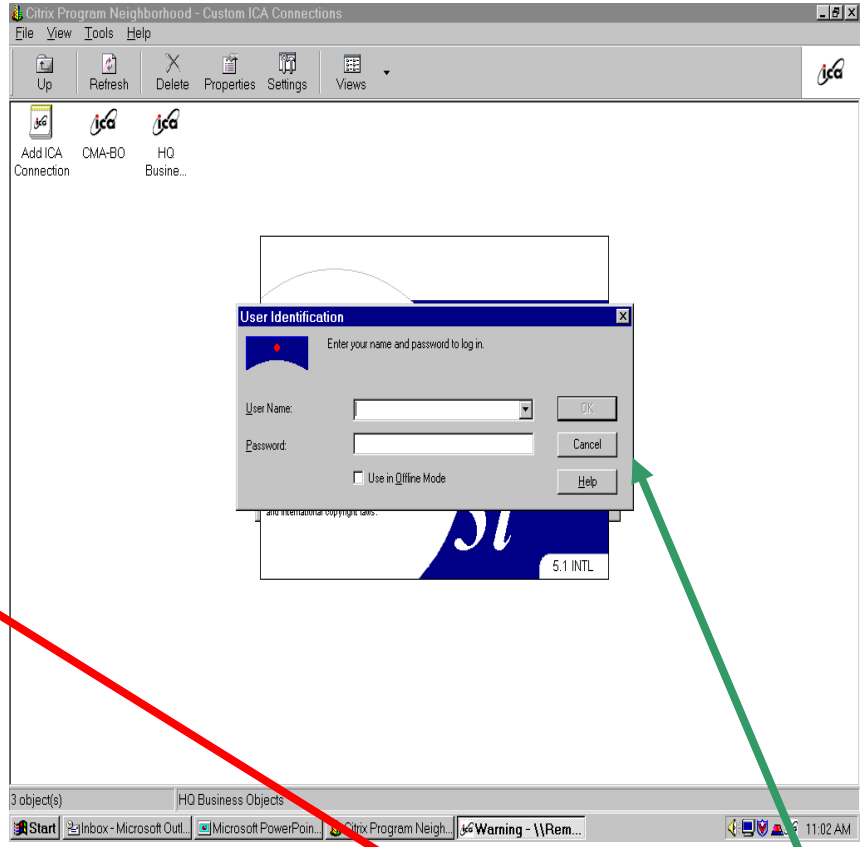
Which gets you to BOA itself
login here with your BOA password





You **must** use your password twice … once for NT once for BOA …. the passwords from one box **do not** automatically roll over to the other box because the NT box has more on it than just HQ BOA





When you log in you must login into NT (the server) and BOA (the application) each time. When you reset your password on one box this does not automatically mean that the password on the other box has been automatically reset
